Medieval Astrology Profile for Stephen Hawking

File History: Initial: 17-Feb-2015; Tables Revised 4-Jul-2016

Introduction to delineation of appearance and character in natal astrology. The following document is a hand-written analysis of **Stephen Hawking**, using the principles of medieval predictive astrology. The discipline of natal astrology focuses on the fate of an individual based on a horoscope cast for the moment of birth. Within natal astrology, the 1st house occupying the eastern horizon at birth describes the native: physical vitality, appearance, and character. Between the Hellenistic and Medieval eras several specialized models were developed to assess these characteristics. They include **longevity** (vitality and length of life), **physiognomy** (form and shape of the face and body), **victor of the chart** (overall life purpose), **manners** (social conduct including ethical behavior), and **temperament** (elemental mix of fire, earth, air, and water with applications in medical astrology). Prior research has presented models and results for longevity (*A Rectification Manual: The American Presidency*, Chapter 4) and physiognomy (*Astrological Physiognomy: History and Sources* & *Astrological Physiognomy: Empirical Tests of the Leo Rising Decan*).

Victor of the Chart. Included are two competing models for computing the victor of the chart said to be the single most powerful planet in the horoscope. According to Plato's follower Porphyry, the planet signifying the victor of the chart by configuration in the natal horoscope shows the life choice made by the soul prior to incarnation. Plato explains the details of his soul model in *The Myth of Er* found in the closing pages of *The Republic*. Porphyry and his peer Antiochus offer specific rules for determining the victor of the chart. The method of Antiochus/Porphyry is compared to a later method for determining the victor suggested by the Jewish Rabbi Abraham ben Meir ibn Ezra, a philosopher and astrologer active in the 12th century. For a discussion of these two models, see the companion paper *Victor of the Chart: Testing Methods of Antiochus/Porphyry and Ibn Ezra*, which serves as a key to what is presented here.

Manners. Plato was not alone among Greek philosophers in conceiving models for the soul. Aristotle's model of vegetative, sensitive, and intellective soul levels (assigned respectively to the plant, animal, and human kingdoms) was taken up by Ptolemy, who found a correspondence between the sensitive and intellective soul and Moon and Mercury in the natal horoscope. The configuration of the Moon and Mercury, with special emphasis given to their rulers, is a second method for analyzing the soul. Ptolemy introduces this model in *Tetrabiblos III.13* "Of the Quality of the Soul.*"* Subsequent authors refer to this model as the "Significators of the Soul" or "Manners." A summary template for the Moon and Mercury is presented in the paper and will be developed further in future versions.

Stephen Hawking (January 8, 1942 - living)

Not since Albert Einstein inaugurated the phenomenon of the celebrity scientist has any scientist come close to repeating Einstein's fame in the public sphere until Stephen Hawking published his best-selling book *A Brief History of Time* in 1988. A theoretical physicist and cosmologist, Hawking has contributed several theories regarding black holes regarded as bridges between General Relativity (gravity) and Quantum Theory. These are two of the four forces which physicists hope will eventually be joined in Unified Field Theory, a goal common to both Einstein and Hawking.

Born exactly 300 years after the death of Galileo, Stephen Hawking enrolled at University College, Oxford in 1959 and by the end of his junior year decided to specialize in theoretical physics. At this time in the history of cosmology there was considerable debate over the origin of the universe: whether it has existed forever in a 'Steady State' or whether it had started from a single point in time referred to as the 'Big Bang.' Spurred by Roger Penrose's work on black holes, Hawking applied the concept to the creation of the universe and placed himself squarely in the 'Big Bang' camp of cosmology. Subsequent discoveries during his lifetime regarding cosmic inflation, most recently by John Kovac on 17-Mar-2014, yielded evidence consistent with the 'Big Bang' theory for the creation of the universe.

Hawking made his initial name in the physics community with a series of papers on black holes written jointly with Roger Penrose between 1968 and 1970. The work required linking Einstein's General Relativity and Quantum Theory. Hawking went on to propose that black holes emitted radiation in 1974, a concept now known as *Hawking radiation*. He initially thought that information absorbed by black holes was completely lost but lost a famous bet made with Jacob Bekenstein in 1973 on this question when Hawking conceded the bet in 2004.

Professionally, Hawking was the Lucasian Professor of Mathematics at the University of Cambridge (1980-2009), once held by Isaac Newton, and has received numerous awards including the Presidential Medal of Freedom awarded by President Barack Obama on 12-Aug-2009.

Outside the professional field of physics, Hawking entered the public eye with his best-selling 1988 book *A Brief History of Time* which included a discussion of Big Bang theory and other concepts for a lay audience. The book ultimately sold over 10 million copies and was central to establishing his global celebrity scientist status.

Diagnosis of ALS shortly after the age of 21 has never slowed Hawking down who has lived remarkably longer that initial forecasts. The sound of his speech synthesizer as well as his appearance riding his wheelchair have become iconic images within popular culture. Recently, he has co-authored a series of fictional children's books with his daughter Lucy beginning with *George's Secret Key to the Universe* first published in 2007.

ASC 20SA26'30"

<u>Stage I. Determine the Ascendant sign</u>

Firdaria

Hawking's widely received public reputation as an astrophysicist stems from publication of *A Brief History of Time* designed to simplify cosmology for the everyday person. Here is the timetable

Firdaria	**(Nocturnal)**	**Life Event**
N Node	8-Jan-81	1982 (no date given). Because 'awards do not pay the bills,' Hawking decided to write a popular book about the universe with appeal to the general public. 15-Dec-83. "Wave function of the universe" published in Physical Review D, basis of what would become *A Brief History of Time*.
S Node	8-Jan-84	1984 (no date given). Started to write *A Brief History of Time*
Sun	8-Jan-86	Continued to write *A Brief History of Time*
Sun-Venus	14-Jun-87	Jul-1987. Final Draft of *A Brief History of Time* completed. 1-Apr-88. *A Brief History of Time* published (US). 16-Jun-88. *A Brief History of Time* published (UK).
Sun-Mercury	16-Nov-88	UK version stayed on British Sunday Times best-seller list for a record-breaking 237 weeks. Similar popularity on NYT best seller list.

© Copyright 2016. Regulus Astrology LLC. All Rights Reserved.

The simplest match is usually the best with the Nocturnal Firdaria Series favoring Hawking because of match of publication of *A Brief History of Time* with the Major Sun period. Both decisions to write the book and the scientific paper on which it was based occurred during the North Node Firdaria period. The book was written during the South Node, Sun-Sun, and finished during Sun-Venus. The New York Times search engine shows the book remaining on the NYT best seller list for nearly all the Sun-Mercury Firdaria period which is important as I suggest that Mercury is the victor of the horoscope.

Additional key professional events also occurred during other Mercury subperiods using the nocturnal series of Firdaria rulers:

Jupiter-Mercury. 16-Nov-1968 to 4-Aug-1970. Published joint papers with Roger Penrose on black holes including his first major paper of 26-Jan-1970 "The Singularities of Gravitational Collapse and Cosmology."

Mars-Mercury. 7-Jan-1977 to 7-Jan-1978. Promoted to rank of Professor at Cambridge and given chair in gravitational physics, Autumn 1977.

Venus-Mercury. 28-Feb-1997 to 21-Apr-1998. Saul Perlmutter and others announced the Universe had been expanding at a slow rate since inception and is destined to continue, 8-Jan-1998. This evidence gave proof to some of Hawking's theories on the origin of the universe.

Mercury-Mercury. 8-Jan-2004 to 16-Nov-2005. Highly publicized Dublin Conference, 21-Jul-2004, where Hawking conceded his bet that black hole information intake does not suffer a 100% loss. Proposed solution of information paradox submitted to Physical Review, 22-Aug-2005; published, 18-Oct-2005.

Conclusion: Hawking was born at night which limits the birth time to between Midnight and 9:17 AM or between 5:04 PM and Midnight.

Moon's Configuration

For 8-Jan-1942 the Moon's Configuration has the following possibilities:

Midnight – 6:04 AM	Moon (Virgo) separates from Jupiter and applies to Saturn
6:04 AM to 6:02 PM	Moon separates from Saturn and applies to Mercury
6:02 PM to 8:48 PM	Moon separates from Mercury and is void of course
8:48 PM to Midnight	Moon makes Libra Ingress and applies to Jupiter

With Saturn/Taurus-rx the significator of Hawking's tracheostomy, e.g., Saturn = partition and Taurus = throat, a major life theme, either of the first two Moon's configurations including Saturn are appropriate. Since speech problems (Saturn) allowed Hawking more time to think alone (Mercury), the most logical choice is the Moon's separation from Saturn and application to Mercury. This limits the birth time from 6:04 AM to 6:02 PM. Taking the intersection of this time zone and for daylight hours suggested by Firdaria analysis above narrows the birth time range to between 6:03 AM and 9:17 AM.

Conclusion: Ascendant range is 5SA07 to 18CP26

Physiognomy - Sign

This report includes two photographs of Stephen Hawking. At left is an earlier photograph which typifies the Sagittarius facial profile: a wide grin is outlined by a diamond shape which is intersected horizontally by the lips: above the lips the diamond shape is traced starting from the sides of the lips and continues to either side of the nose; below the lips the diamond shape is traced from the sides of the lips to the chin. This is the classic 'Joker' facial profile of Batman cartoon fame.

Conclusion: Sagittarius is the Ascendant sign, between 5SA07 and 29SA59.

Configuration of the Chart

By way of confirmation, at least three major life patterns are consistent with the Sagittarius Ascendant.

First is Hawking's breathing difficulties which resulted in a tracheostomy on 18-Mar-1985. The planet responsible for this condition is Saturn/Taurus-rx because Saturn signifies a partition and Taurus is assigned to the throat. For Sagittarius rising, Saturn/Taurus-rx is placed in the 6th of illness.

Second is empirical evidence that air flight, space, and cosmology are assigned to Sagittarius. This is a consistent finding in my work. For Hawking, this is confirmed by the transit of Jupiter 18SA48 near the Ascendant degree of the final rectified horoscope on 26-Apr-2007 for the day he experienced zero gravity under controlled conditions in an aircraft. Hawking is on record stating this event was one of the key events of his entire life.

Finally if we go back to Firdaria, note that Sagittarius rising places Gemini on the 7th with Jupiter/Gemini-rx in the 7th house. On 31-Dec-1962 at a New Year's Eve party, Stephen Hawking met his wife-to-be Jane Wilde just 7 days before the onset of his Major Jupiter Firdaria period.

Conclusion: Sagittarius is the Ascendant sign.

<u>Stage II. Determine the Ascendant's range within 1-4 degrees</u>

Physiognomy - Decan

The reason why I include two photos for Hawking is to demonstrate the power of the ruler of the rising decan to help fine tune Stage II rectification through shape of the face. Compared to the earlier photo (L), the 2006 photo (R) shows a more pronounced lower jaw which makes the face appear more rectangular in shape. Rectangular or square shapes are associated with fixed signs in John Willner's facial-sign model. In choosing between the Sagittarius, Aries, and Leo as possible rising decans, Hawking's squarish-shaped face suggests Leo as the rising decan. Lord Sun is placed in Capricorn which corresponds to the ovate shape in Willner's facial-sign model (not a match). However see that Sun/Capricorn is received by Saturn/Taurus which is placed in a fixed sign and the logical physiognomy significator for the shape of Hawking's face. Saturn-retrograde also introduces asymmetry in the face, notably the way it leans to one side.

Conclusion: Ascendant sign degree range is 20SA00 – 29SA59.

Lots

My initial rectification attempt favored 7:17:52 based on dynamic activity to the Lot of Accusation, Exile, and Injury for Hawking's surgeries and accidents. I will present some of those comparative measurements next as a learning exercise. Ultimately the ability of physiognomy to define Leo as the rising decan (just explained) favored a later time 7:25:48 necessary to move the Ascendant degree beyond 20SA00 to meet the requirements of Leo as rising decan. The slightly later time advances the Lot in question by 1 degree 38 minutes. I suggest there remain a sufficient number of measurements close enough to Lot computed for the later time to narrow the Ascendant degree range to within 2 degrees which meets the requirements of the Stage II rectification process.

	Preliminary Rectification	Final Rectification
Time	7:17:52 AM	7:25:48 AM
Ascendant degree	18SA48	20SA26
Rising Decan	Aries	Leo
Lot of Accusation, Exile and Injury + Antiscia	25SC11/4AQ49	26SC49/3AQ11

18-Mar-1985 Tracheostomy	1985 solar return. Saturn 25SC20, South Node 24SC47 **trSaturn 28SC01**, **c.s.a. South Node 2AQ31**
5-Mar-1991 Hit by car, broken arm Thrown from wheelchair	1991 solar return. Mars 28TA001 on 7th cusp opposed Ascendant. **trSaturn 2AQ52**, **c.s.a. Sun 27SC23**
28-Dec-2001 Wheelchair accident Broken hip, required surgery	2001 solar return. Saturn 24TA20-rx d.s.a. Moon 23SC16, **c.s.a. Mercury 26SC52**
1-Dec-2003 Hospitalized for pneumonia	2003 solar return. Mars 24SC07 d.s.a. Moon 25SC11, c.s.a. Mercury 24SC56
14-Nov-2005 Flatlined after taken off respirator	2005 solar return. Saturn 24CA24, MC 4AQ50 **d.s.a. Moon 27SC08**, **prog Moon 3AQ39**,
18-May-2009 Hospitalized for exhaustion	2009 solar return. **Moon 26TA35** conj srASC 22TA42 d.s.a. North Node 24SC30, **trNorth Node 3AQ41**, **cazimi Mercury 27TA30 retrograde**

Dynamic activity to lots and their antiscia is a recommended Stage II rectification step advocated in *A Rectification Manual*, Chapter 11, for the ability of lots to specify a class of events to what amounts to be a customized Ascendant (the lot itself) rather than relying on the Ascendant alone. Hawking's horoscope is a good example of how dynamic activity to lots yields more accurate rectification results.

The Astrodatabank record for Hawking presents two similar rectifications by Noel Tyl (10:00 AM BST, ASC = 1AQ34) and Isaac Starkman (10:08:30 BST, ASC = 4AQ47). Scanning the above event list, it appears likely that Tyl and/or Starkman used dynamic activity between 2 and 4 degrees of Aquarius for Hawking's accidents in support of an Ascendant range between 2 and 5 degrees of Aquarius. The approach I advocate in *A Rectification Manual* differs because the robust methods in Stage I (Firdaria, Configuration of the Moon, Physiognomy, Configuration of the Chart) narrow the Ascendant degree range before events like these are considered.

Stage III. Determine the exact Degree and Minute of the Ascendant

Solar Arc Directions

8-Jun-1968. *c.s.a. Sun conj ASC*.
22-Jun-1968. *d.s.a. ASC conj Sun*.

The year 1968 marked the 1st of 3 papers published jointly with Roger Penrose on black holes. The first paper was the runner-up in the 1968 Gravity Research Foundation competition (no date).

7-Jan-1973. *c.s.a. MC conj Moon*
27-Jan-1973. *d.s.a. Moon conj MC*

Book "The Large Scale Structure of Space-Time"; co-authored with George Ellis is published. Date on Preface before authors' names is *January 1973*; Amazon reports a publication date of 29-Jun-1973. The book was very technical and considered unreadable by most people, consistent with the Moon's placement in the detail sign of Virgo. Moon is placed in the 9th of publishing (by quadrant houses) or the 10th of career (by whole sign houses). This was Hawking's 1st book following his papers with Roger Penrose written in the years 1968-1970. It is considered a classic in the field.

29-Aug-1978. *c.s.a. Mercury conj ASC*.
23-Sep-1978. *d.s.a. ASC conj Mercury*.

Awarded the 1st Albert Einstein Medal and an honorary doctorate from University of Oxford (Award in 1978, no exact date found)

26-Jan-1979. *c.s.a. MC conj North Node*
21-Feb-1979. *d.s.a. North Node conj MC*

Media prominence in advance of Einstein's 100th birthday on 14-Mar-1979 which was marked by a number of panels, conferences, and exhibitions. Hawking is mentioned prominently in a NYT article dated 13-Mar-1979 "Scientists, Looking Ahead, Mark Einstein's Centennial." During this time period, Hawking edited the book "General Relativity, an Einstein Centenary" published 28-Aug-1979.

21-Jul-2004. *c.s.a. MC opposed Venus*
1-Oct-2004. *d.s.a. Venus opposed MC*

The horoscope features a Libra-MC ruled by Venus (sign) and Saturn (exaltation) and Venus/Aquarius/3rd applying to the square of Saturn/Taurus-rx/6th with mutual reception by sign. What does this mean? It is certainly consistent with the ability of nursing staff (Venus ruling the 6th) to overcome Hawking's disability which otherwise would prevent him from short-term travels (Saturn ruling the 3rd). But a more traditional reading recalls that the 6th house is the house of bad luck. As lord of the house, Venus applying to Saturn in the house, and both ruling the 11th of friends and alliances, is consistent with several famous bets Hawking made with colleagues which he lost. The 1st direction for 21-Jul-2004 is an exact date match to Hawking conceding a famous bet at the Conference on Generaly Relativity and Gravitation held in Dublin. Hawking had earlier bet that information associated with matter consumed by black holes suffered a 100% loss with no recovery. He conceded that bet on this date.

Mars conj Alrisha 1 03’(Fishes)	☿♂							
Mars conj Vertex 0 29’ (Andromeda)	♀							

KEY – Mubtazz Scoring
Single point: assigns 1 point for each essential dignity
Early medieval: sign 5, exaltation 4, bound 3, primary triplicity lord 2, decan 1. Used by al-Kindī and Māshā’allāh.
Late medieval: sign 4, exaltation 4, triplicity lords (all) 3, bound 2, decan 1. Used by Schoener; taught by Zoller.

Fixed Stars from Janus 4.3 software. Criteria: conjunction within 2 degrees longitude.

Additional

Moon’s Configuration: Moon separates from Saturn and applies to Mercury, nocturnal, preventional.

Moon-Mercury whole sign aspect? Yes Moon applies by trine to Mercury.

Do scoring methods agree? Yes. Manners are signified by **Mars-Mercury**.

Model Summary

(for model details see www.regulus-astrology.com/research.html)

Physiognomy

Ascendant sign: Sagittarius
Ascendant sign ruler: Jupiter/Gemini-rx
Ascendant decan: Aries
Ascendant decan ruler: Mars/Aries
Planets/Nodes placed in the Ascendant sign or decan: n.a.

Longevity: not delineated for the living

Victor of the Chart: Mercury/Capricorn

Ibn Ezra's method favors Jupiter, Mars or Mercury; Porphyry's Stage I expanded criteria favors Mars or Mercury. Based on astrological criteria, Mars is favored because of sign placement, solar phase, and conjunction to the Lot of Fortune. Mercury is somewhat limited if considered still under the sunbeams in a 10 degree separation from the Sun (which is the criteria maintained for this study, e.g., under the sunbeams = 7 to 12 degrees from the Sun). Classifying Mercury as under the sunbeams for that reason may be an example where the rules are too tight. Mercury will in fact make its visible appearance as a nocturnal star within 7 days of birth, is moving quickly, and is in the favored occidental position as an evening star in a nocturnal figure. Mars applies to and is received by Mars so the effects of Mars as a victor contender will still be felt through the relationship to Mercury.

Choice of Mercury is confirmed by Hawking's career milestones made during Mercury subperiods.

Manners: Mars-Mercury.
